

Tadiran Telecom Announces Coral® Navigator

New Desktop Communication Productivity Tool Increases Communication Efficiency for Tadiran Coral IPx Users

Port Washington, N.Y. – April 25, 2007 – Tadiran Telecom®, a leading global IP business telephone and communications supplier, today announced the availability of its newest application, the Coral® Navigator, a complete desktop communication productivity tool that provides a personal portal for harnessing the power of the Coral IPx telephone. The Coral Navigator ties the PC to the phone, combining all types of multimedia communications, phone features and capabilities, and phone administration options – Instant Messaging, user presence, telephone status, video sharing, call preferences, call routing rules, video conversations, call recording – to further increase communication efficiency for users within the Tadiran Coral IPx system.

Coral Navigator is an application that enables the enterprise to streamline business processes and leverage communication as a competitive advantage. The Navigator provides an intelligent communications platform while utilizing presence awareness capabilities, providing the user with a set of tools to communicate with the right person at the right time in the right way.

Coral Navigator provides a global, visual indicator of all activity within the Coral system, giving users an intuitive, PC-based communication productivity tool for getting the most from Tadiran's Coral IPx family of products. Navigator is a presence application allowing users to see the status of other users, set up buddy lists and personal profiles. It provides a visual interface for managing voice conference bridges, making and receiving voice and video calls and Instant Messaging sessions. It also allows users to route and redirect inbound calls based on personal preferences.

"Coral Navigator makes using the phone much easier and interacting with other users better," said Pat Lennon, Tadiran's director of marketing. "For example, Coral Navigator gives each user a searchable call log, and the ability to dial from any Windows-based application that contains a telephone number."

Lennon added, "One of the favorite features of the Coral Navigator is that each individual user gets a visual – or video portal – of the many things the Coral system can do, such as seeing the call status of a co-worker or sending an Instant Message. We're excited about this product because it ties the PC to the Tadiran telephone and improves the effectiveness of great features of our Coral IPx."

Coral Navigator's key features and capabilities include:

Contact Management – Navigator improves the ability to manage inbound communications with rules, profiles and buddy lists. Users can manage their contacts, the complete telephone system directory and personal telephone lists in a single place, so names can be quickly and easily found.

Instant Messaging – A secure "internal only" additional messaging service allows users on the system to communicate with text to other users, an especially useful way of unobtrusively asking a question to a co-worker while they are on a call.

Conference Bridging – Tadiran’s Coral IPx systems feature “meet me” conference facilities. Callers simply dial the four-digit bridge number (or are transferred) and automatically enter a meeting place for many callers. With Coral Navigator, the participants can be viewed, muted or removed. This visual representation of who is currently on the bridge confirms each participant.

Call Logging and Recording – A searchable history of call activities that features archiving of recorded phone conversations and rules for setting up automated recordings. A user can easily play a recording, attach it to an email or archive it to a network drive.

Personal Call Rules – Navigator allows users to route calls to other extensions or remote numbers or automatically record a specific caller in the call log.

Profiles and Status – With Navigator, users can set up personal profiles that incorporate rules to deliver calls. Users simply set the status (for example, Default, In a Meeting, On Lunch, On Vacation, Out of Office, etc.) in their personal profile, and their calls will be routed based on the profile status.

Button Programming – Navigator simplifies the customization of the programmable buttons on Tadiran’s desk set telephone. Users set up desired features and labels based on their individual needs using simple menus.

Dialer – With Navigator, users can preprogram the system with a set of phone numbers, time to dial and a description of the intended call. When the time arrives, Navigator will remind the user about the call, providing the description of the call and enabling easy dialing.

Tadiran’s award-winning family of Coral IPx products are based on open standards, allowing businesses and organizations of all sizes to move to the world of IP-based communications in stages, at the speed that suits their needs. The Coral IPx family includes a breadth of products that combine leading edge Voice over IP (VoIP) technology at the best total cost of ownership, backed by superb voice quality, easy installation and maintenance, secured communications, and a wide choice of user devices to support tele-workers, corporate and branch offices, and road warriors. With deployments in 41 countries, the Coral IPx products can easily adapt to different companies, different networks and different countries.
