

Tadiran Telecom Inks Another Subway Telecom Deal in Chongqing, China

Petach Tikva, Israel, Plainview, NY– July 27, 2010 - Tadiran Telecom, a leading global IP business telephony and communications supplier, announced today that it has again been awarded a tender to provide communications solutions to the Chongqing Metro Group.

The Chongqing Metro Group, responsible for the construction, management, and development of all subway lines in Chongqing, was established in 1992, and is a wholly state owned enterprise. It has a registered capital of 20 billion yuan (US\$3.2 billion).

Further to the customer's satisfaction with the first deployment of the Coral at the end of 2009, Chongqing Metro once again made the choice of Coral, KTT, and Tadiran for Subway No. 6.

And only two weeks ago, we reported on the selection of the Coral for Wuhan Metro Group as follows: "The success of the Coral in other Subway projects, both in China and other countries, is well documented and frequently used as references to new projects such as this. In this vertical market, in addition to being used in the administrative organizations, the Coral is called upon to serve the mission critical Dispatch function of the project".

In the current solution, 66 of the IPx 3000 systems are to be installed in the stations along the subway line, and the remaining 4 IPx 3000 systems at the

Control Headquarters. They will be networked via QSIG and monitored centrally by the Coral Fault Manager. KTT, Tadiran's subsidiary in China, will implement this project.
